## The Middle East A Cultural Psychology

GARY GREGG, *Kalamazoo College*

For over a decade the Middle East has monopolized news headlines in the West. Journalists and commentators regularly speculate that the region's turmoil may stem from the psychological momentum of its cultural traditions or a "tribal" or "fatalistic" mentality. Yet few studies of the region's cultural psychology have provided a critical synthesis of psychological research on Middle Eastern societies.

Drawing on autobiographies, literary works, ethnographic accounts, and life-history interviews, *The Middle East: A Cultural Psychology* offers the first comprehensive summary of psychological writings on the region, reviewing works by psychologists, anthropologists, and sociologists that have been written in English, Arabic, and French. Rejecting stereotypical descriptions of the "Arab mind" or "Muslim mentality," Gary Gregg adopts a life-span-development framework, examining influences on development in infancy, early childhood, late childhood, and adolescence as well as on identity formation in early and mature adulthood.

A sophisticated account of the Middle East's cultural psychology, *The Middle East* provides students, researchers, policy-makers, and all those interested in the culture and psychology of the region with invaluable insight into the lives, families, and social relationships of Middle Easterners as they struggle to reconcile the lure of Westernized life-styles with traditional values.
